Testing digital accessibility
How to test?

Functional design (UX)

Testing practices

Is there an alternative to complex movements? 1/2

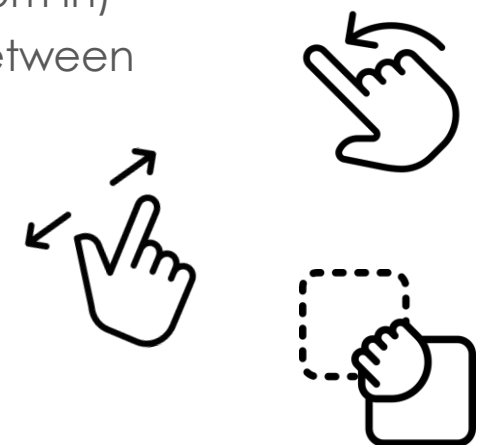

Features that are available through a complex gesture should also be available through a simple gesture.

- **Simple gesture**

Involves contact at a single point on the screen
(a single click, a double click, a long press)

- **Complex gesture**

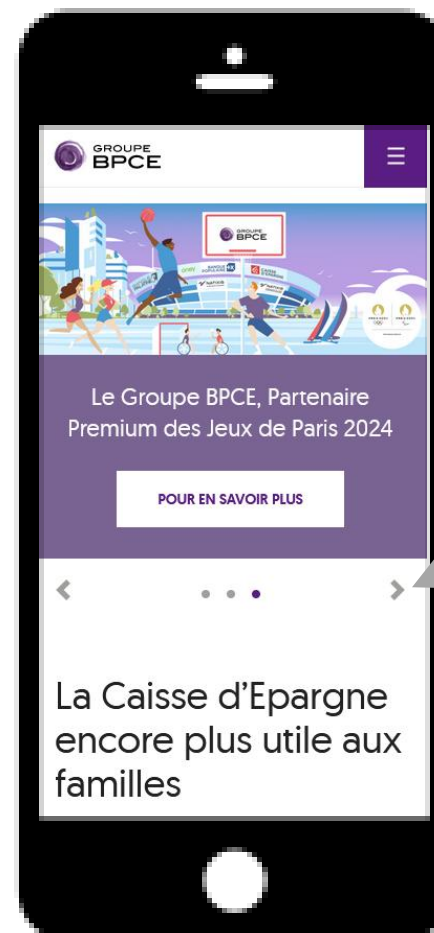

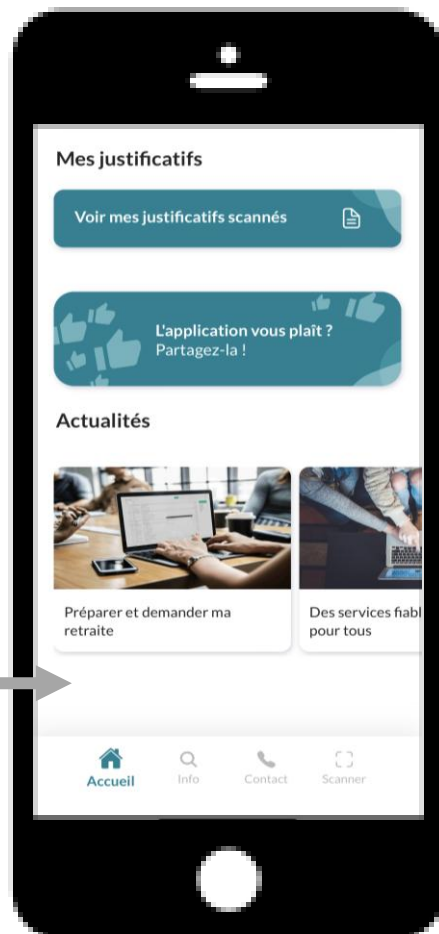

Involves several contact points (e.g. two fingers on the screen to zoom in)
or the tracking of a path (e.g. swiping a finger left or right to switch between items in a carousel)

Is there an alternative to complex movements? 2/2

Add left/right arrows
to move to
the next/previous
items

Is it possible to monitor each time limit? ^{1/2}

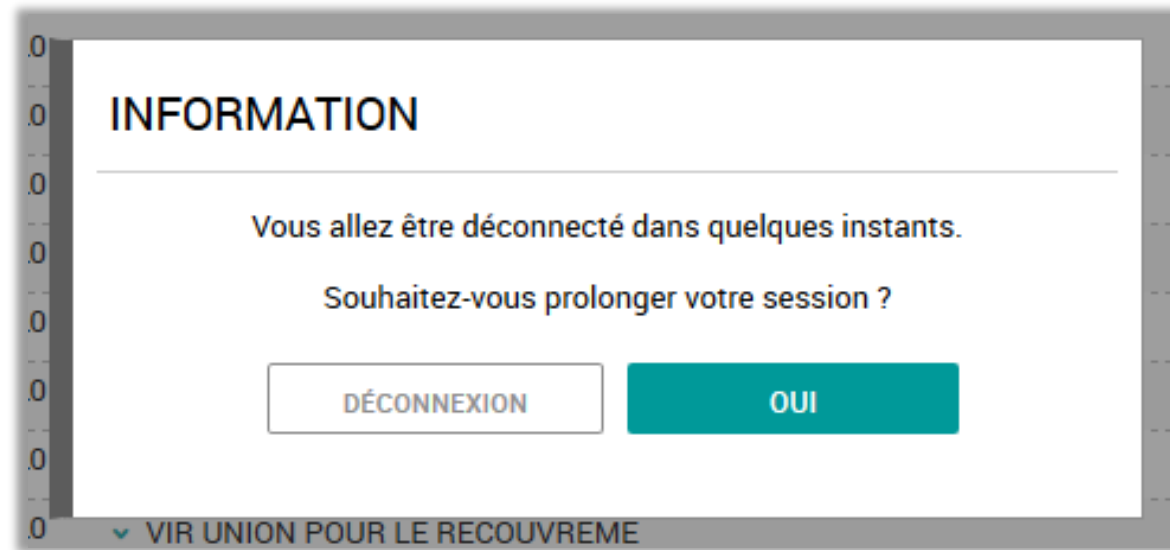

A means of removing time limits must be provided:

- Session time (online shopping, checking bank details, administrative procedures, etc.)
- Timer (time limit for a test)

Is it possible to monitor each time limit? 2/2

If it is not possible to completely remove the time limit for a session (for security reasons, for example), then a means of extending its duration must be provided.

Does each field have a clear label? ^{1/2}

Are the contrasts sufficient? 7/10

For all graphic elements that convey information (images, buttons, icons, etc.)

- Minimum contrast ratio of 3:1

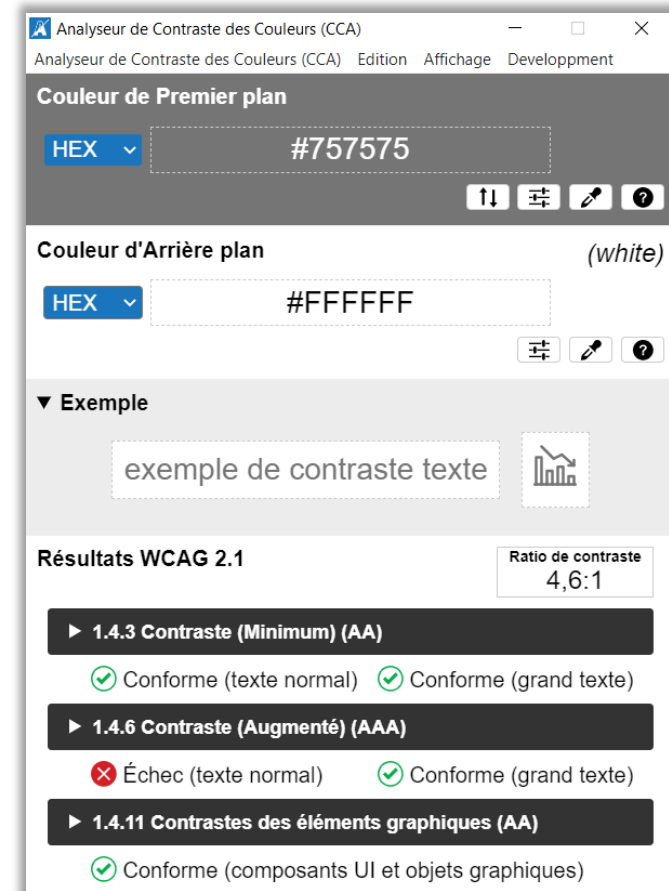

For texts, texts in images, embedded texts (video, etc.)

- Regular text (< 24px or 18,5px bold): 4.5:1 minimum
- Large text (>= 24px or 18,5px bold): 3:1 minimum

Are the contrasts sufficient? 8/10

NORMAL TEXT
How accessible are the colors on your website?
WCAG 2.1 guidelines state that colors should have a text-to-background contrast ratio of 4.5:1 for normal text and 3:1 for large text to meet basic AA requirements or 7:1 for normal text and 4.5:1 for large text to meet the stricter AAA requirements (always strive to aim for strict!).

Ensuring a high contrast ratio for your site's design can make it easier for visually impaired and color-blind users to read the contents of your website.

And if you aren't interested in changing the design or aesthetics of your website, you can always install the UserWay accessibility widget on your site so users who require it can change your website's contrast ratio for themselves!

✓ Pass AA

✓ Pass AAA

LARGE TEXT
How accessible are the colors on your website? WCAG 2.1 guidelines state that colors should have a text-to-background contrast ratio of 4.5:1 for normal text and 3:1 for large text to meet basic AA requirements or 7:1 for normal text and 4.5:1 for large text to meet the stricter AAA requirements (always strive to aim for strict!).

Web development

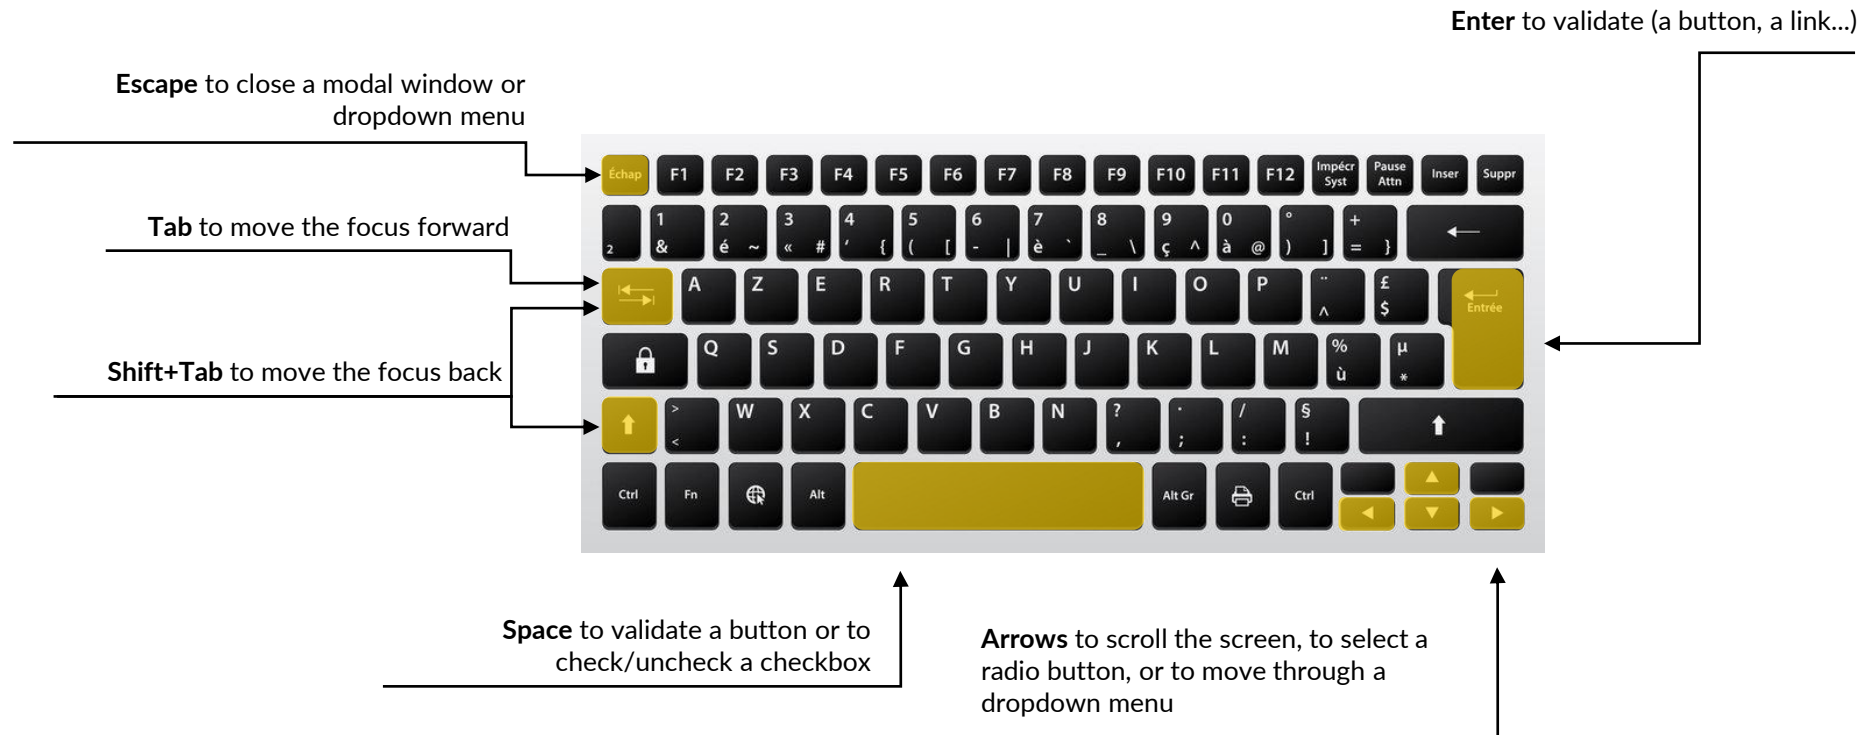

Testing practices

Is the interface usable with the keyboard only? 1/5

- Disclosure components, modal windows, accordions, tooltips ...
- Forward and backward navigation
- Keyboard traps
 - Being stuck on an element with no way to exit it
 - Looping in an area of the page with no way to exit it

Is the interface usable with the keyboard only? 2/5

Exercise 4

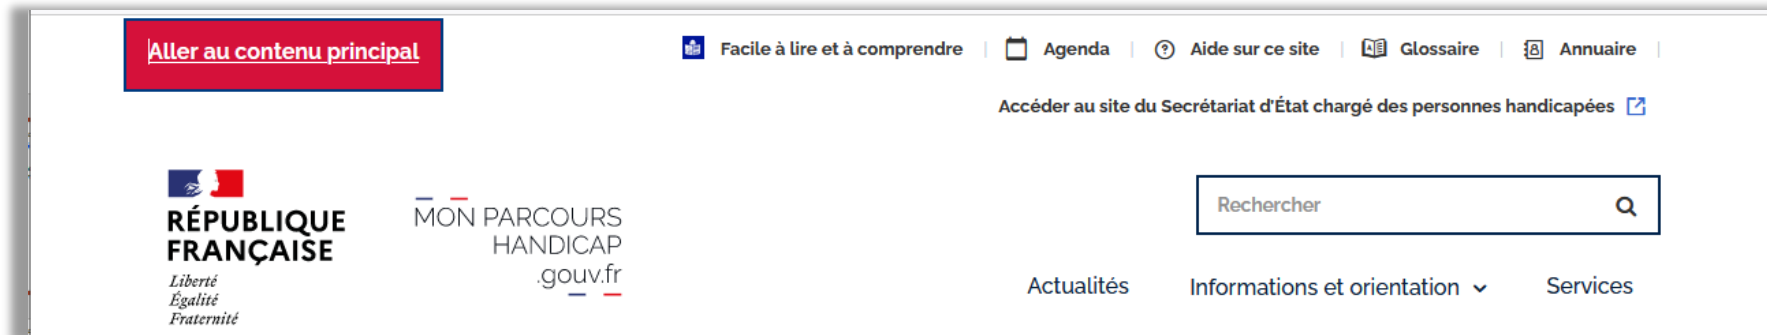

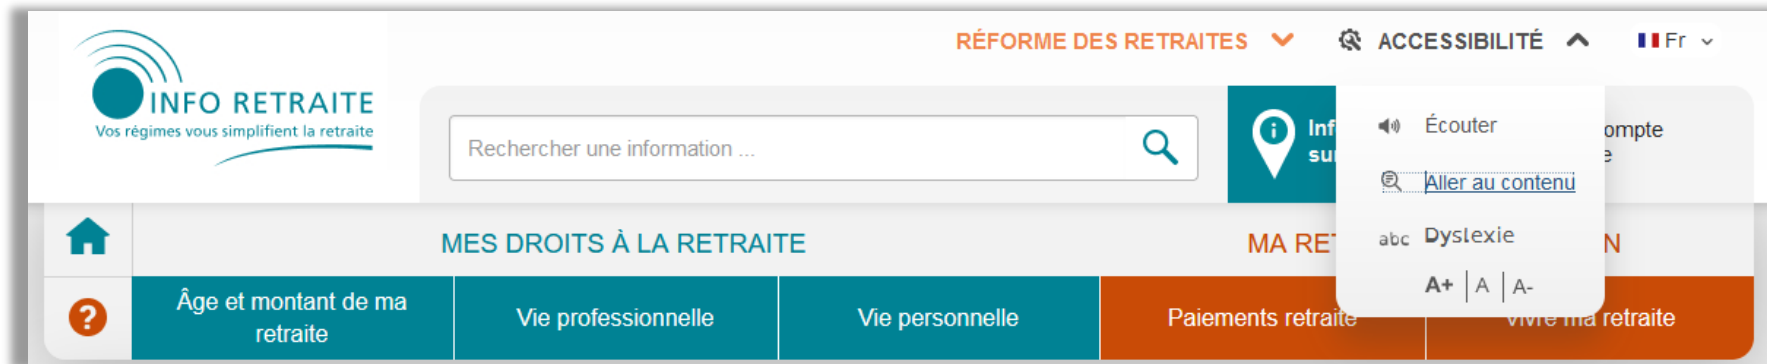

Now it's your turn!

Is the interface usable with the keyboard only? ^{3/5}

Skip links

A skip link such as “Skip to content” must always be present at the top of each page to facilitate keyboard navigation

Is the interface usable with the keyboard only? 4/5

Keyboard focus

Each interactive element (link, button, checkbox, etc.) must be visually highlighted when focused (using the browser's default effect or a customized effect with sufficient contrast).

Is the interface usable with the keyboard only? 5/5

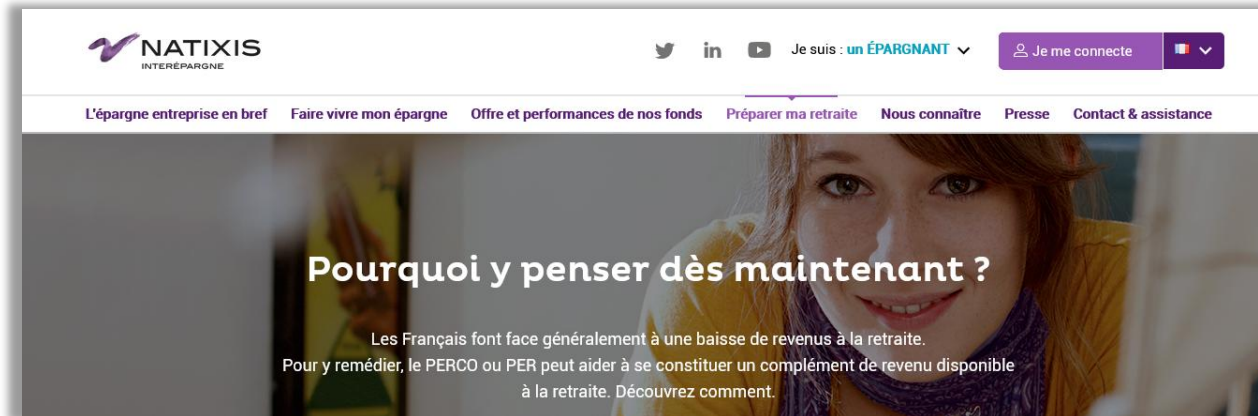

Tab order

The tab order must follow the logical visual reading order of the page.

Web development

Does content remain legible and features usable when text size is doubled? ^{1/2}

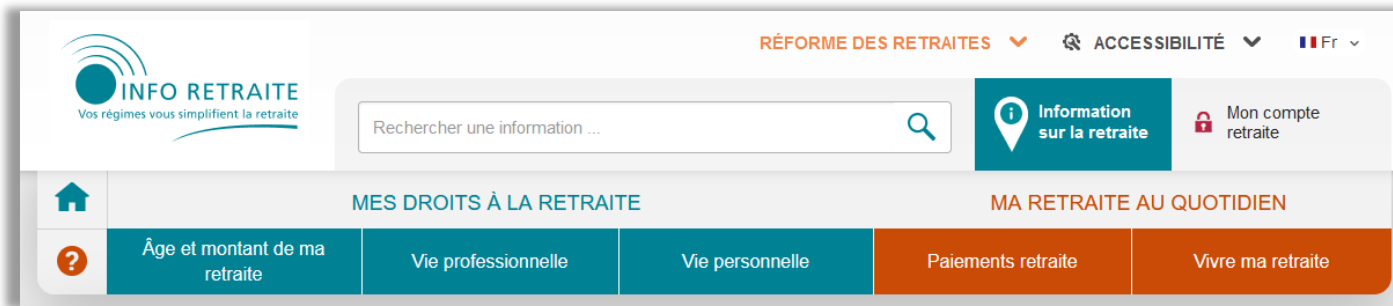

Default zoom

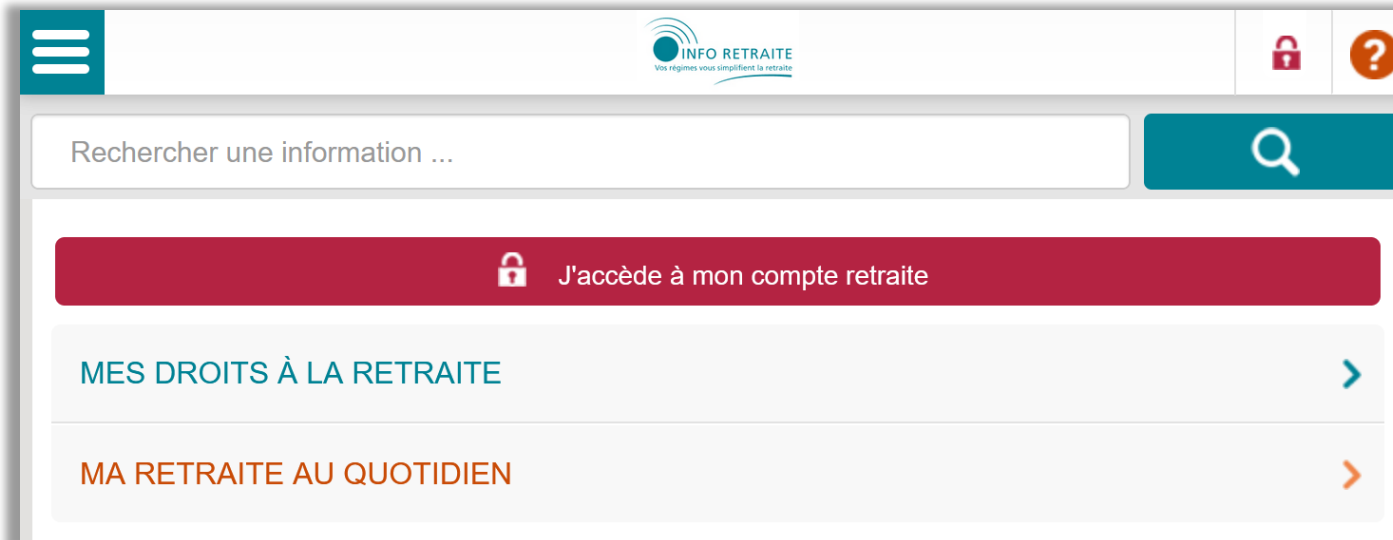

200% zoom

Does content remain legible and features usable when text size is doubled? 2/2

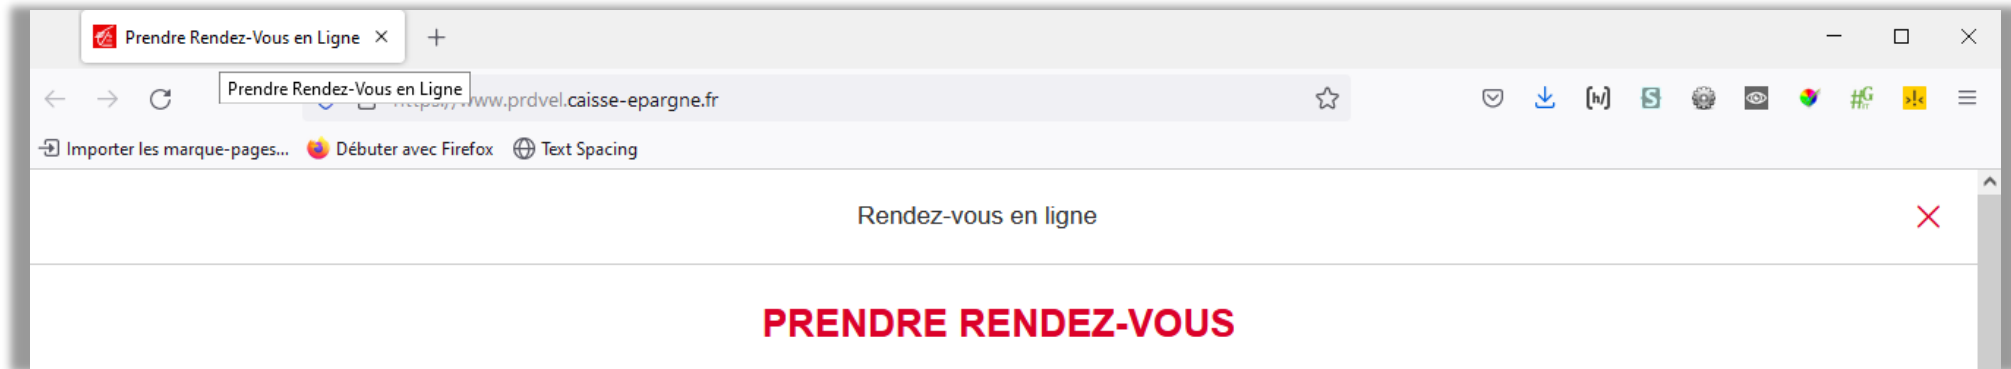

Default zoom

200% zoom

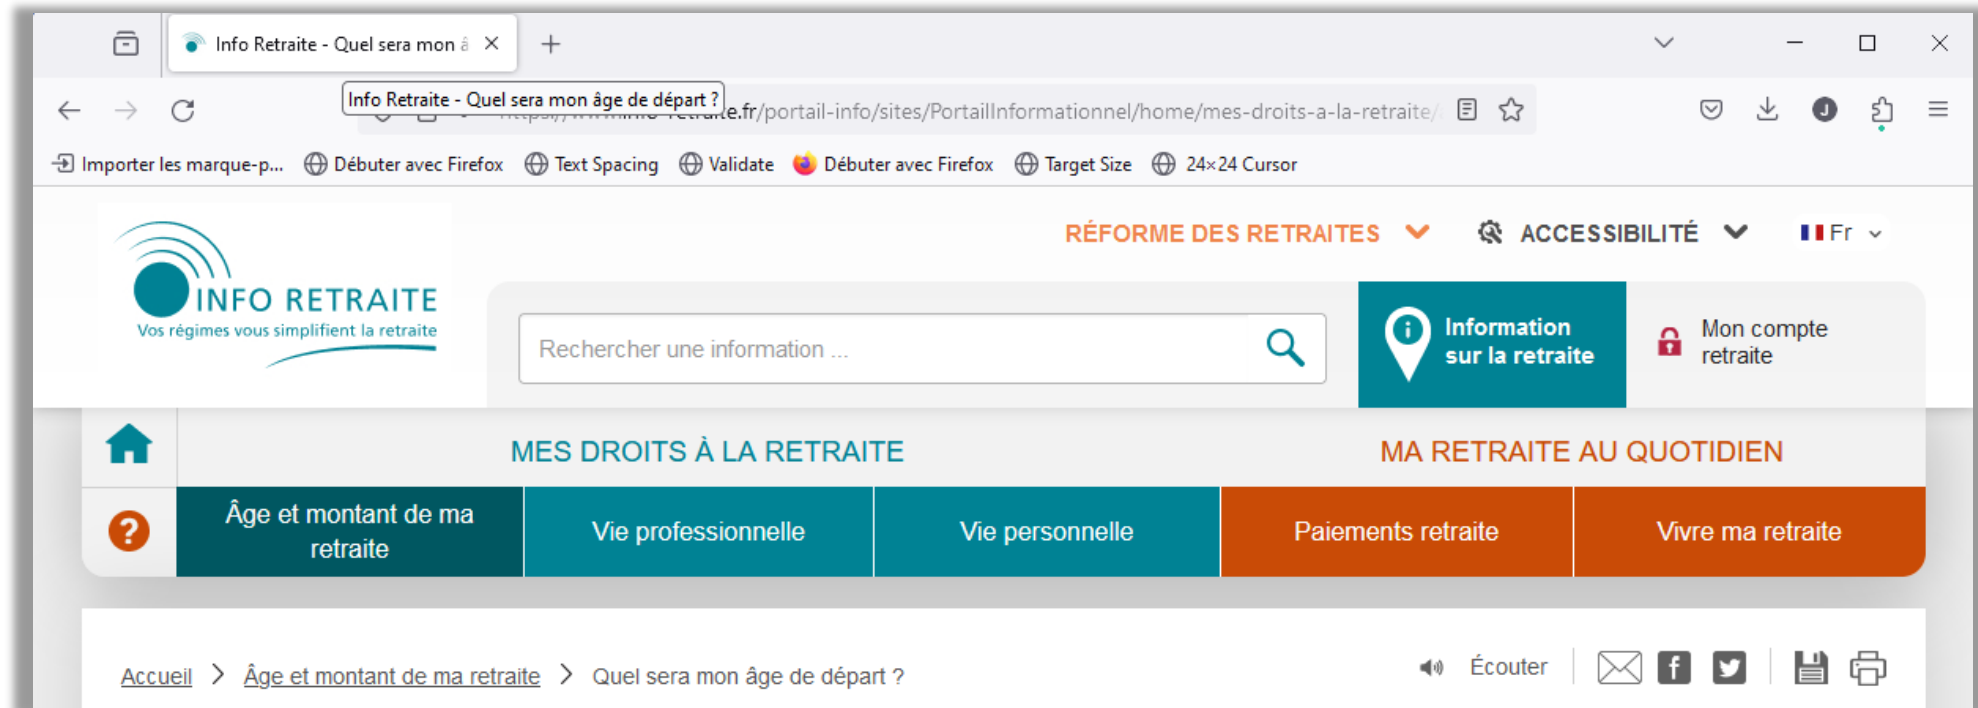

Does each page have a specific title? ^{1/2}

- The title must at least include the name of the current page and the name of the site
- It is recommended to display the name of the current page first

Web development

Does each page have a specific title? 2/2

Is each label associated with its field?

Clicking the label should move the keyboard focus into the associated field

The diagram shows a login form titled "Connexion sans FranceConnect". It contains two input fields: "N° de sécurité sociale (13 caractères)" and "Mot de passe". A red square with a white 'X' and an arrow points to the "N° de sécurité sociale" label, indicating an incorrect association. A green square with a white checkmark and an arrow points to the "Mot de passe" label, indicating a correct association. The "Mot de passe" field is highlighted with a blue border, and the "Me connecter en accès limité" button is visible at the bottom.

Connexion sans FranceConnect

La connexion sans FranceConnect ne vous donne pas accès à tous les services, mais à une offre limitée.

N° de sécurité sociale (13 caractères)

Je ne connais pas mon N° de sécurité sociale

Mot de passe

Mot de passe oublié ?

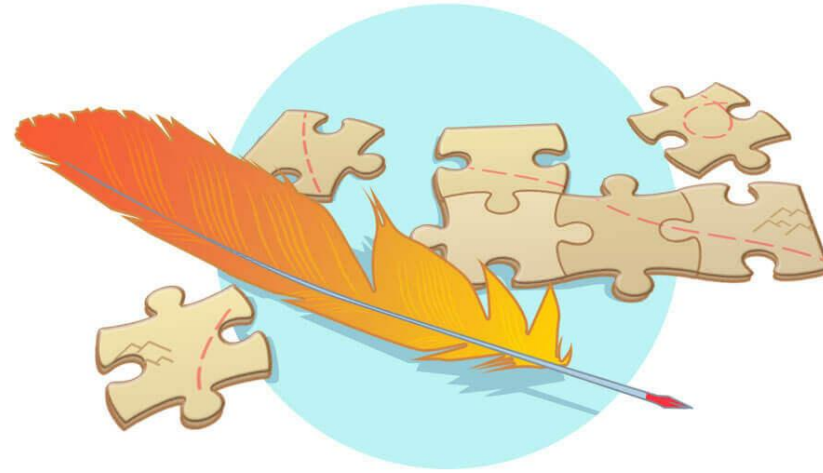

→ Me connecter en accès limité

Web development: checklist

- ☐ Is the interface usable with the keyboard only?
 - ☐ Keyboard focus visibility
 - ☐ Tab order
 - ☐ Keyboard interactions
 - ☐ Skip link
- ☐ Does content remain legible and features usable when text size is doubled?
- ☐ Does each page have a specific title?
- ☐ Is each label associated with its field?

This list is not comprehensive.

For further details, we recommend consulting AcceDe Web's [HTML and CSS accessibility guidelines](#).

Editorial content

Testing practices

Are PDF documents accessible?

- Accessibility rules also apply to published documents such as PDFs
- Best practices for accessibility exist for Word, PPT, InDesign, and when exporting these formats to PDF

Content

Are accessibility features available for each informative audio (transcript) and each video content (transcript, closed captions, audio description)?

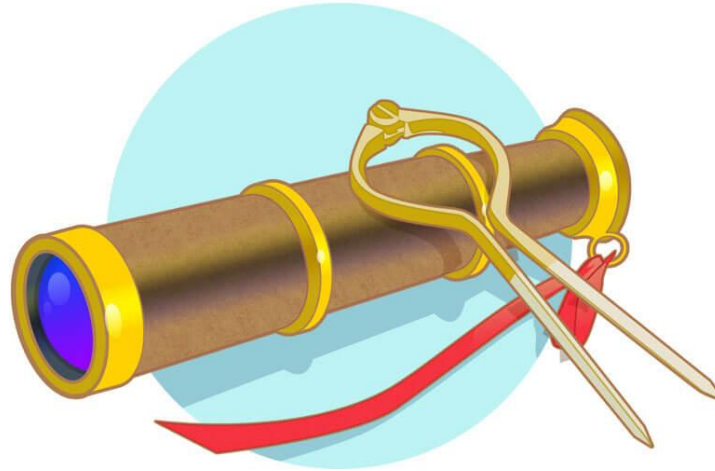

Content: checklist

- ☐ Are PDF documents accessible?
- ☐ Are accessibility features available for each informative audio (transcript) and each video content (transcript, closed captions, audio description)?

This list is not comprehensive.

For further details, we recommend consulting AcceDe Web's [HTML and CSS accessibility guidelines](#).

Case study

Thank you!
